ABSTRACT

B1
An apparatus for pressure tight discharge of refiner material, ~~for example such as~~ cellulosic material by using a screw (16), which feeds the material ~~towards an counterstay between a screw shaft and screw housing~~ whereby ~~an a~~ pressure[-]tight material plug is formed at ~~the an~~ outlet of the screw housing. The screw (16) is, at the out end, provided with, a ~~portion flange~~ (22), which together with a throttle means (24) journaled around ~~said portion in the house (14) of the apparatus~~ the flange forms an adjustable outlet opening (28) through which ~~said~~ material is fed out by the screw while ~~the material forming forms a~~ pressure tight material plug (40).
